

RESOLVE NETWORK COMPLEXITIES AND GENERATE MORE PROFITS

THE DIGITAL TRANSFORMATION MAY SEEM DAUNTING

SDN, NFV, and cloud create new revenue streams, but add an extra layer of complexity to the today's network solutions. The lack of sufficient resources to leverage their potential fast enough may result in stalled projects and failure to deliver on opportunities.

We can support your team with the required skills so that you can focus on core strengths and deliver innovation before your competitors

YOUR REQUIREMENT

ACCELERATE SERVICE DELIVERY WITH SDN

EMBRACE AGILITY & GET FIRST TO MARKET WITH INNOVATION

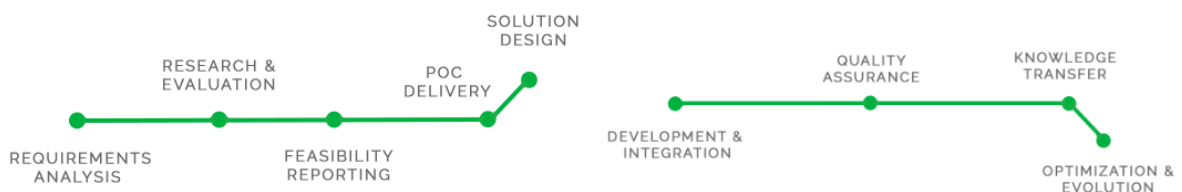

DELIVER WHOLESALE SERVICES FASTER WITH STANDARD APIS

BUILD ROBUST CLOUD ORCHESTRATION SOLUTIONS

OUR OFFER

CUSTOM APPLICATIONS DEVELOPMENT

Optimize your application in record time with minimal overhead.

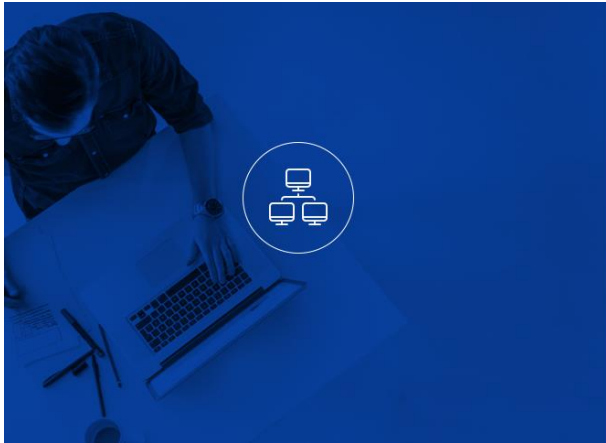

WHAT

- Effective analysis of product complexities and requirements
- Expert solution design & conceptualization
- Proof of Concept delivery
- Engineering and deployment.
- Maintenance and support.
- Project management

HOW

- Full ownership of a client's project from day one
- Smooth transition across all phases of the development cycle
- Mature dedicated teams of highly experienced solution analysts, architects, designers and engineers

SOFTWARE SYSTEMS INTEGRATION

Stay ahead of the game with flexible IT systems

WHAT

- Integration with internal and external systems
- Building solutions using components and standards that are optimized to meet your goals
- Evaluating the requirements and existing systems
- Risk and feasibility analysis
- Solution design & implementation
- Automated testing and maintenance

HOW

- Combining proven domain experience with reliable platforms and best practices
- Providing autonomous expert teams who deliver the requested solution
- Supplying individual senior-level engineers with required skills to existing development teams

R&D AND NEW PLATFORM DEVELOPMENT

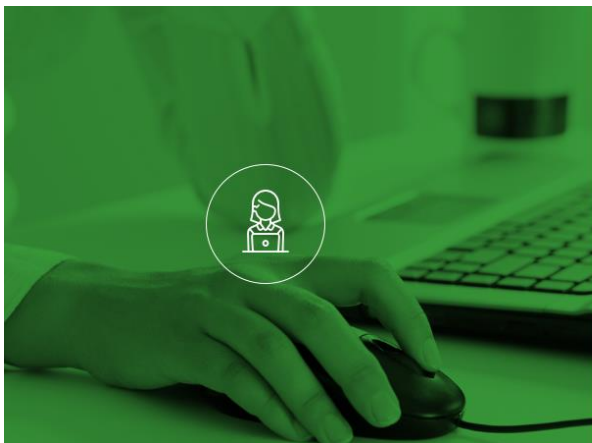

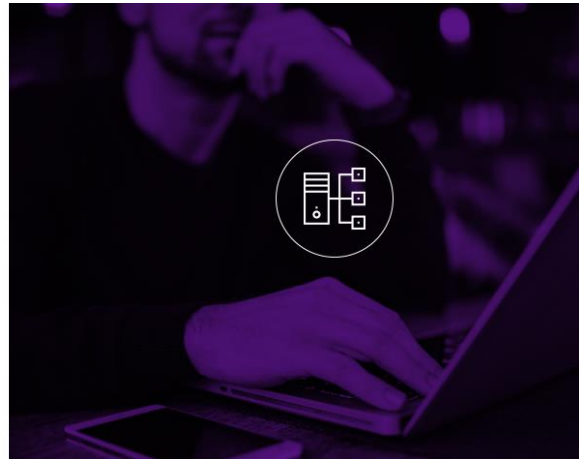

Deliver robust, scalable solutions tailored to your customers' needs

WHAT

- Requirements analysis and solution recommendation
- Industry standards evaluation
- Knowledge transfer to customer teams
- Goal-oriented risk and feasibility reports
- PoC / demo development, implementation and presentation
- Design and implementation of innovative solutions
- Delivery of production-ready solutions

HOW

- 15 years of product development experience
- Working with emerging standards (protocols, API, concepts) and technologies
- Active participation & contribution to standardization bodies and communities
- Flexible collaboration models

EXPERT CONSULTANCY

Elevate your software performance to the next level

WHAT

- SDN application development
- NFV solution development & integration
- Cloud orchestration integration
- MEF Lifecycle Service Orchestration expertise
- Networking standards and protocols
- Carrier & Service Provider environments

HOW

- Providing expertise across the entire software development lifecycle from concept through integration & deployment
- Open Source contribution (LSO, OpenDaylight, hackathons)

TESTING & TEST AUTOMATION

Verify your solutions

WHAT

Building solutions using components and standards that are optimized to meet customer goals

- Evaluation of the requirements and existing systems
- Risk and feasibility analysis
- Design of the solution
- Implementation
- Automated testing and maintenance

HOW

- Delivering autonomous teams to deliver requested solution
- Delivering individual engineers with required skills to existing development teams
